IT IS VERY IMPORTANT THAT YOU ("CUSTOMER") READ AND FULLY UNDERSTAND THE RISKS OF TRADING AND INVESTING IN YOUR KINGSTON10 EXCHANGE, LIMITED SELF-DIRECTED KINGSTON10 EXCHANGE, LIMITED ACCOUNT ("CUSTOMER ACCOUNT").

All Customer Accounts are self-directed.

Accordingly, Customers are solely responsible for any and all orders placed in their Accounts and understand that all orders entered by them are unsolicited and based upon their own investment decisions or the investment decisions of their duly authorized representative or agent.

Consequently, Customer agrees that Kingston10 Exchange, Limited does not:

1. provide investment advice in connection with a Customer Account;
2. recommend any security, transaction or order;
3. act as a market maker in any investment;
4. make discretionary trades; and
5. produce or provide research.

To the extent that research materials or similar information is available through the Kingston10 Exchange, Limited website, mobile application or the websites of any of its affiliates are intended for informational and educational purposes only; they do not constitute a recommendation to enter into any crypto transactions or to engage in any investment strategies.

The Kingston10 Exchange trading platform available www.kingston10exchange.com has no set market hours and operates 24 hours, seven (7) days per week, nevertheless, Customers on www.kingston10exchange.com have the ability to set Limit Orders that are executed, automatically, once the price of the crypto reaches the set price for buying or selling. Kingston10 Exchange, Limited recommends the use of Limit Orders to help to protect against the potential for loss of some or all of your exchange-traded funds during your hours of unavailability.

GENERAL RISKS OF TRADING AND INVESTING

All crypto exchange traded funds or other investment vehicles, is speculative in nature and involves substantial potential risk of loss. Kingston10 Exchange, Limited encourages its Customers to invest carefully, to use the information available at the websites of the SEC at http://www.sec.gov and FINRA at http://FINRA.org to know the protection, or lack thereof, that they are afforded when trading crypto currencies and to invest only what they can comfortable afford to lose.

Customers can review public companies' filings at the SEC's EDGAR page. FINRA has published information on how to invest carefully at its website. Kingston10 Exchange, Limited may make some of this information available on www.kingston10exchange.com. Kingston10 Exchange, Limited believes it is very important that Customer understands all the risks involved any form of trading or investing prior to trading or investing real dollars. As is always stated, past performance is not necessarily indicative of future results.

Therefore, by investing money in securities through Kingston10 Exchange, Limited's trading platform, located at www.kingston10exchange.com, Customer takes full responsibility for all trading actions and should make every effort to understand the risks involved prior to trading or investing real dollars..

1. You may lose money trading and investing.

Trading and investing in crypto currencies is always risky; arguably, more risky than stocks and other more traditional forms of investment vehicles. For that reason, Customers should trade or invest only with money they can afford to lose. While this is an individual matter, typically an investor should risk no more than 10 (%10) or 20 (%20) percent of his or her liquid net worth; however, in many cases, they should risk less than that. For example, if 10 percent of your liquid net worth represents your entire retirement savings, you should not use that amount to buy and sell crypto currencies. Trading crypto currencies involves HIGH RISK, you can lose a lot of money. Before investing in crypto customers must determine whether this type of investment vehicle is right for them, taking into consideration their specific investment objectives, experience, risk tolerance, and financial situation.

2. Past performance is not (necessarily) indicative of future results.

All investments carry risk; all decisions of the individual making the trade is the responsibility of that individual. There is no guarantee that systems, indicators, or trading signals will result in profits or that they will not result in a total loss. Customers are advised to fully understand all of the risks that comes with trading or investing in any kinds of investments that they choose to invest in.

3. Stop orders may reduce, but not eliminate, your trading risk. Customer may still lose the investment.

A Stop Market Order is an order placed to buy or sell a particular investment at the market price if and when the price reaches the specified price. Stop Orders are often used by traders in an effort to limit the amount they might lose if the price of the item they are investing in goes up or down, depending on their aim. If and when the investment reaches the specified price, a Stop Order becomes an order to execute the desired trade at the best price immediately obtainable.

There is no guarantee, however, that the desired Stop Order will execute under all market conditions. In an active, volatile market, the market price may be declining (or rising) so rapidly that there is no opportunity to liquidate your position at the stop price you have set. Under these circumstances, the broker's only obligation is to execute your order at the best price available. Therefore, a Stop Orders may reduce, but not eliminate, your trading risk.

RISKS OF INVESTING IN CRYPTO CURRENCIES

Investments always entail some degree of risk. Cryptocurrencies have been growing in popularity, but if you're considering investing in them, there are some key things you should know first. Be aware that:

• Some investments in crypto currency cannot easily be sold or converted to cash. Check to see if it is possible and if so, is there is any penalty or charge if you must sell an investment quickly.

• Investments in crypto currencies issued by a company with little or no operating history, or published information, involves greater risk than investing in an established coin/company with an operating history and extensive public information. Investments in crypto currencies are not federally insured against a loss in market value, so use care in choosing which cryptocurrencies/companies you invest in.

• Stock you own may be subject to tender offers, mergers, reorganizations, or third-party actions that can affect the value of your ownership interest. Pay careful attention to public announcements and information sent to you about such transactions. They involve complex investment decisions. Be sure you fully understand the terms of any offer to exchange or sell your shares before you act. In some cases, such as partial or two-tier tender offers, failure to act can have detrimental effects on your investment.

• The greatest risk in investing in cryptocurrencies is having the value fall to zero. On the other hand, the risk of selling cryptocurrencies short (not available on all cryptocurrency trading platforms) can be substantial. "Short selling" means selling a cryptocurrency that the seller does not own, or any sale that is completed by the delivery of an investment borrowed by the seller. Short selling is a legitimate trading strategy, but assumes that the seller will be able to buy the cryptocurrency at a more favorable price than the price at which they sold short. If this is not the case, then the seller will be liable for the increase in price of the shorted cryptocurrency, which could be substantial.

For example, you may short Bitcoin by betting against it using derivatives, like futures and options; neither of which are available on Kingston10 Exchange trading platform at www.kingston10exchange.com.

• Investors should consider their investment objectives and the unique risk profile of any cryptocurrency carefully and before investing. Cryptocurrencies are subject to risks, similar to those of other investment vehicles. Investments in cryptocurrencies may not be suitable for all investors and may increase exposure to volatility through the use of leverage (*Leverage works like a loan. Your exchange loans you extra position against the collateral you provide; therefore, allowing you to invest $1000.0 worth of a particular cryptocurrency, though you only have $100.0 worth of that collateral in your wallet.*), short sales, derivatives (*Any product or contract whose value is determined by an underlying asset.*), and other complex investment strategies.

• Although cryptocurrencies are designed to provide investment results that (*generally*) corresponds to the performance of their respective underlying indices, they may not be able to exactly replicate the performance of the indices because of expenses and other factors. A prospectus/whitepaper contains this and other relevant information about the cryptocurrency and should be read carefully before investing. Customers should obtain prospectuses/whitepaper from issuers and/or their third party agents who distribute and make prospectuses/whitepaper available for review… generally available on their respective website.

Today, cryptocurrencies are NOT required to distribute portfolio gains to hodlers/holders at year end.

These gains may be generated by portfolio re-balancing or the need to meet diversification, people or other requirements. Cryptocurrency (exchange) trading will also generate tax consequences.

• Though not specifically related, additional regulatory guidance on Cryptocurrencies Exchange Traded Products may be found at the SEC and FINRA websites noted above.
